"HOW-TO" GUIDE

Caring

Lawn Rejuvenation

Your Master Nurseryman Recommends:

1. Cut your lawn
2. Core your lawn, approximately one foot apart
3. Rake core plugs off of lawn. They can be reused in your flower beds
4. If your lawn needs feeding, now is the opportune time while the core holes are exposed
5. Evenly spread one bag of **Master Nursery Paydirt** per 100 sq. ft. of lawn
6. Rake with a lawn rake to fill core holes
7. Using a **DRAMM Fertilizer Siphon Mixer**, spray lawn area with **Master Nursery Soil Penetrant**

And on an ongoing basis:

- Allow your lawn to grow to 2 ½ inches during the warm weather
- Water twice a week applying at least 1 inch of water
- Water in the morning only
- During the warm summer months, feed with a low nitrogen fertilizer such as **Master Nursery Formula 49 (8-4-4)**
